Installation Guidelines:

1. The Slick Stick™ interface float and alarm panel will ship separately from the tank.
2. Install the 1/2" FPT brass coupling to the end of the Slick Stick™ interface float. Thread the 1/2" MPT x socket PVC fitting into the 1/2" FPT brass coupling.
3. If the tank is to be installed above grade, or without any adjustment to the adapter, install a length of 1/2" sch. 40 PVC pipe between the bottom of the junction box and the top of the 1/2" MPT x socket PVC fitting. Choose the length from Table 1 that corresponds with the unit, and oil capacity to be monitored.
4. If the tank is buried, and the adapter will be adjusted upward and/or risers will be used, add the total upward extension dimension to the length determined from Table 1 to determine total length of 1/2" PVC pipe length. For example, assume an OS-75 is being installed below grade and requires 26" of riser extension. Assume you want the control panel to alarm when the oil capacity reaches 70% of the total oil capacity. The length of the 1/2" PVC pipe extension should be 26" (riser depth) + 10" (from Table 1) = 36".
5. Run interface float wiring through 1/2" PVC pipe and into the bottom of the junction box inside the adapter. Connect wiring to alarm panel (see wire diagram).
6. Once power is applied, the alarm will sound. Fill the tank to the active water line to silence the alarm.

Table 1: 1/2" PVC Pipe Length
